11. TOXICOLOGICAL INFORMATION

POTENTIAL HEALTH EFFECTS

ACUTE HEALTH EFFECTS

Swallowed

Although ingestion is not thought to produce harmful effects (as classified under EC Directives), the material may still be damaging to the health of the individual, following ingestion, especially where pre-existing organ (e.g liver, kidney) damage is evident. Present definitions of harmful or toxic substances are generally based on doses producing mortality rather than those producing morbidity (disease, ill-health).

Although the material is not thought to be an irritant (as classified by EC Directives), direct contact with the eye may produce transient.

Eye contact:

Limit evidence exists, or practical experience predicts, that the material may cause eye irritation in a substantial number of individuals and/or may produce significant ocular lesions which are present twenty-four hours or more after instillation into the eye(s) of experimental animals. Repeated or prolonged eye contact may cause inflammation characterized by temporary redness (similar to windburn) of the conjunctiva (conjunctivitis); temporary impairment of vision and/or other transient eye damage/ulceration may occur.

Skin contact:

The material is not thought to produce adverse health effects or skin irritation following contact (as classified by EC Directives using animal models). Nevertheless, good hygiene practice requires that exposure be kept to a minimum and that suitable gloves be used in an occupational

setting

Inhalation:

The material is not thought to produce adverse health effects or irritation of the respiratory tract (as classified by EC Directives using animal models). Nevertheless, good hygiene practice requires that exposure be kept to a minimum and that suitable control measures be used in an occupational setting.

Chronic effects:

Long-term exposure to the product is not thought to produce chronic effects adverse to health (as classified by EC Directives using animal models); nevertheless, exposure by all routes should be minimized as a matter of course.

TOXICITY AND IRRITATION

Not available. Refer to individual constituents. discomfort characterized by tearing or conjunctival redness (as with windburn)

12. ECOLOGICAL INFORMATION

15. REGULATORY INFORMATION

NOTES

This substance should be managed in accordance with the requirements specified in the Cleaning Products (Subsidiary Hazard) Group Standard 2006

HSNO Approval Number HSR002530.

HSNO Classifications: 6.1E: Substances that are acutely toxic, May be harmful, Aspiration hazard
6.4A: Substances that are irritating to the eye
6.5B: Substances that are contact sensitizers
8.3A: Substances that are corrosive to ocular tissue

-
- 9.1D: Substances that are slightly harmful to the aquatic environment or are otherwise designed for biocidal action
9.2B: Substances that are ecotoxic in the soil environment
9.3C: Substances that are harmful to terrestrial vertebrates
